Art Unit: 2622

1. The following is an examiner's statement of reasons for allowance: the prior art (include US 2002/0036603) fails to show or fairly suggest a video signal processing apparatus having the combination as claimed, including a detector which detects whether or not an input video signal is based on a telecine-converted video signal obtained by telecine conversion in a 2-3 pulldown conversion system from a film source having 24 film frames per second, a frame memory, a **writing device which writes the input video signal in said frame memory on a line sequential scanning frame unit base in synchronism with a first vertical synchronizing signal for writing, a reading device which reads out the written line sequential scanning video signal in said frame memory in synchronism with a second vertical synchronizing signal for reading, and a synchronism controller which generates the second vertical synchronizing signal having a frequency different from a frequency of the first vertical synchronizing signal in synchronism with the first vertical synchronizing signal of a starting frame of five frames forming a pattern after the conversion in the 2-3 pulldown conversion system when said detector judges that the input video signal is based on a telecine-converted video signal, as recited in the claim.**

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
